Each year in the United States, approximately 200,000 hospitalized patients experience a cardiac arrest. To assist in the care of these patients, the 2015 Update to the American Heart Association (AHA) Guidelines for Cardiopulmonary Resuscitation (CPR) and Emergency Cardiovascular Care (ECC) was recently published. Beginning in 2015, the AHA Guidelines will be changing from a 5-year update to a continuously updated Web-based format available online at ECCguidelines.heart.org.
