Measles Vaccination in Healthcare Workers

There have been seven confirmed or suspected cases of measles in Monroe County since January 2019. All cases occurred in unvaccinated persons. Because of their sustained, numerous interactions with immunocompromised patients, healthcare workers can be significant disease vectors if proper precautions are not taken. Below is a selection of articles on the methods, barriers and outcomes to HCW measles vaccination.

- **Healthcare Workers and Post-Elimination Era Measles: Lessons on Acquisition and Exposure Prevention.** Gohil SK, Okubo S, Klish S, Dickey L, Huang SS, Zahn M.

- **Implication of health care personnel in measles transmission.** Torner N, Solano R, Rius C, Domínguez A, Surveillance Network Of Catalonia, Spain TM.

- **A global perspective of vaccination of healthcare personnel against measles: systematic review.** Fiebelkorn AP, Seward JF, Orenstein WA.
